

TELEMEDICINE

WHAT IS LA TELEMEDICINE ?

Telemedicine is a medical practice based on new technologies and designed to facilitate relations between patients and healthcare professionals.

It can be used to draw up a diagnosis, prepare for a therapeutic decision and provide preventive or post-care monitoring.

THE TELEMEDICINE MODULE IN **NETSOINS**

Telemedicine is a fast-growing trend involving a wide variety of projects in different areas.

If your establishment is seeking involvement in such a project, including integration with computerised resident records, **Teranga Software** can offer its **NETSoins Telemedicine module**.

This includes all the necessary key features, all the way from authentication to teleconsultation report. Whatever the teleconsultation devices used (specialised carts, remote data collection devices, video system) and pathologies addressed, **NETSoins Telemedicine** can meet your needs.

The telemedicine module includes the following features:

- Authentication of authorised persons.
- Gathering resident consent.
- Basic information factsheet filled in prior to a teleconsultation.
- **APPOINTMENT-TAKING** : queries the healthcare professional's schedule.
- Remote operation for a number of devices required for teleconsultation (e.g. ECG device for cardiology consultations).
- Prescription of procedures or medication after the diagnosis.
- Consultation reports including constants can be saved to **NETSoins**.
